

Your Passport to Winning Poker

Whether you're new to Texas Holdem, or a seasoned veteran, **CardShark2** will take your game to the next level – and beyond.

Through a new and innovative approach, **CardShark2** determines the player's true chance to win in any given scenario. Most learning tools use a statistical calculation to determine odds. The problem is that there are far too many variables in a hand to statistically estimate the player's opportunity with the necessary degree of accuracy.

When you're down to playing head-to-head, calculating odds is fairly simple. A simple count of outs can get you close. But with a table of 8 or 9 opponents, the permutations become astronomical. Just consider - with 52 cards in the deck and 9 opponents, there are over 9 billion, billion permutations facing you. Counting outs won't do it.

CardShark2's breakthrough technology takes into account all the critical factors - many of which are ignored by other approaches.

Of course, knowing the winning percentage for your hand isn't all there is to it either. **CardShark2** takes you to the next level by factoring in the number of opponents, your position, and the number of callers and raisers. With the Winning Percentage adjusted to account for those variables, **CardShark2** then uses the Win Odds in relation to the Pot Odds to provide the player with a recommended play.

“CardShark2 taught me more about winning at Texas Holdem in a couple of days than I think I’ve learned in the last 3 months.”

S. Hammond

Standard Module

CardShark2 is a very effective learning tool that permits you to do an unlimited number of "what if" scenarios. Have you ever wondered:

- How one pair of hole cards stacks up against another - say A-J off-suit compared to 9-9?
- What your odds are with a pair of Jacks against 8 opponents vs. against 2 opponents? You know that you should play weaker hands in a short-handed situation – but **how much** weaker?
- The most appropriate play when you're in late position with a medium pair, there is a raiser and a caller in front of you - and the table is playing aggressively?

CardShark2 will answer those questions and many, many more.

There are obviously a nearly infinite number of scenarios that a poker player faces. **CardShark2** helps you recognize similar scenarios by allowing you to set up and test any scenario you wish.

You tell **CardShark2** the hole cards, your table position and the number of opponents, and in moments **CardShark2** will tell you the Winning Percentage and Win Odds for that exact scenario. Whether you're at pre-flop or on the river, **CardShark2** will quickly calculate your odds so that you can determine the best play for you. **CardShark2** is about TEACHING YOU to play Holdem - not about telling you what to do.

Your Passport to Winning Poker

In addition to using **CardShark2** to learn how to handle multiple scenarios, you can get realtime guidance while in a safe environment by practicing your game against computer opponents in Texas Holdem video game software.

CardShark2 assists the beginning through intermediate player by teaching just how much the Winning Percentage will change depending on number of opponents, and how table position should influence your decisions.

More advanced players will particularly appreciate seeing how **CardShark2** responds in post-Flop play, where the permutations become truly astronomical.

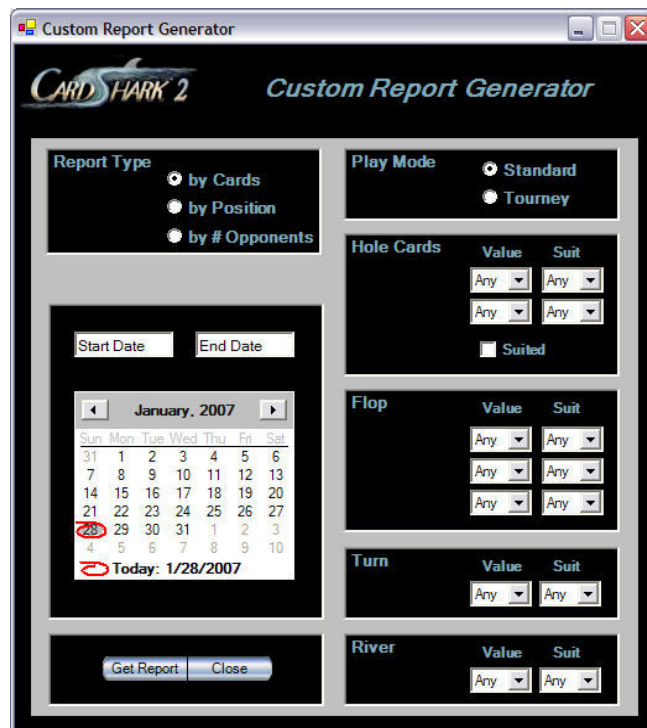

CardShark2 is designed to be used how YOU wish to use it. Whether playing against sharp computer opponents, or running scenario after scenario to see how the Winning Percentages change, **CardShark2** fits your style and your needs – to help you become a better Holdem player in less time.

CardShark2 includes the Standard Module that supports Limit, Table Limit and No Limit games, both cash games and tournaments.

Tourney Module

CardShark2 is complete with the **Custom Report Generator**. This tool provides you the opportunity to create literally hundreds of custom reports from your historical hand data.

Custom Report Generator

Also included is the Tourney Module. This approach is for tournament play only and represents a very aggressive style of play.

In Tourney Mode you essentially either fold or go all-in. You won't want to rely on this style of play too much, but it can really throw your opponents a curve when used in the most appropriate phase of a tournament.

The **Custom Report Generator** permits you to select Standard Play vs. Tourney Play, any cards you wish, player position, and number of opponents.

You select the date range that you want a report on, set the criteria you are interested in, and the Custom Report Generator does the rest - in seconds.

You may print the report by clicking on the Printer icon, or export it to a Word document or an Excel spreadsheet.

So if you're ready to take your game to the next level -
